Protect your products by notifying staff and visitors that static control precautions are needed. Signs allow you to establish the areas requiring static protective measures. Apply them to doors, floors, walls, tote boxes, or to any area containing static sensitive parts. As part of ISO9000, may companies have implemented ESD control programs that reference the standards ESD 20.20, EIA 625, or MIL-HDBK-263. These standards require that work areas for static sensitive items be designated.
