## Setting Stops on A112 and A125 Models

The number of switch positions is adjustable on A112 and A125 models only by means of a stop ring provided with each switch. The number of positions is pre-set on all other models and the stop ring is factory installed.

To set stops: Turn shaft fully counter-clockwise and insert stop ring tab in desired hole. Install lockwasher and nut to retain stop ring for both PC and panel mounting. Switch without stop ring has 12 positions.

## Soldering, Cleaning and Assembly Instructions for 'MC' Termination Option

## Soldering

1. Insert switch base only into PC board.

2 Do not bend terminals.
3 Wave soldering recommended at
500F solder temperature.
4. Hand solder at $500 \mathrm{~F}, 10 \mathrm{sec}$. max. terminal.

## Switch Assembly

1. Hold housing/shaft assembly by housing. Remove protective cap by squeezing tabs and discard. (FIG. 1)
2 Do not push on switch shaft. Detent mechanism will come apart.
2. While holding switch housing, align locating tab on base with notch on housing and engage 4 housing latches in slots on base. (FIG. 2)
3. Push firmly on housing until latches snap in place.
4. Remove clip from shaft and discard. Assembly is complete. (FIG. 3)

## Cleaning

1. Flux clean using vapor degreaser and forced rinse or triple bath method.
2 Do not allow switch base to 'trap' fluids.
2. Freon TMC, TF or Methylene Chloride give excellent results.
