Description

The IXDD604/IXDF604/IXDI604/IXDN604 dual high-speed gate drivers are especially well suited for driving the latest IXYS MOSFETs and IGBTs. Each of the two outputs can source and sink 4A of peak current while producing voltage rise and fall times of less than 10ns. The input of each driver is TTL and CMOS compatible, and is virtually immune to latch up. Proprietary circuitry eliminates cross conduction and current “shoot-through.” Low propagation delay and fast, matched rise and fall times make the IXDD604/IXDF604/IXDI604/ IXDN604 ideal for high-frequency and high-power applications.

The IXDD604 is configured as a dual non-inverting driver with an enable. The IXdN is configured as a dual non-inverting driver, the IXDI is configured as a dual inverting driver, and the IXDF is configured as a dual inverting + non-inverting driver.

The IXDD604/IXDF604/IXDI604/IXDN604 family is available in a standard 8-pin DIP (PI), 8-lead SOIC (SIA), 8-lead SOIC with an exposed grounded metal back (SI), and an 8-lead DFN (D2) package.
