## Functional Description

The CY2907 is a general-purpose Clock Generator designed for use in a wide variety of applications—from graphics to PC peripherals to disk drives. It generates selectable system clock frequencies from a single reference input (crystal or reference clock). The CY2907 is configured with an EPROM array, much like the other devices in the Cypress EPROM Programmable Clock Family, making it easily customizable for any application. Furthermore, the CY2907 is compatible with all industry-standard 9107 and 9108 clock synthesizers.

## CyClocks™ Software

CyClocks is an easy-to-use software application that allows you to configure any one of the EPROM Programmable Clocks offered by Cypress. You may specify the input frequency, PLL and output frequencies, and different functional options. Please note the output frequency ranges in this data sheet when specifying them in CyClocks to ensure that you stay within the limits. You can download a copy of CyClocks free on the Cypress Semiconductor website at [www.cypress.com](http://www.cypress.com).

Consider using the CY2081, CY2291, or CY2292 for applications that require unrelated and multiple output frequencies. Consider using the CY2071A for applications that require more than one output clock.

## Cypress FTG Programmer

The Cypress Frequency Timing Generator (FTG) Programmers are portable programmers designed to custom program our family of EPROM **Field** Programmable Clock Devices. The FTG programmers connect to a PC serial port and allow users of CyClocks software to quickly and easily program any of the CY2291F, CY2292F, CY2071AF, and CY2907F devices. The ordering code for the Cypress FTG Programmer is CY3670.
