Product Number: CY3210-MINIPROG1

The CY3210-MiniProg1 is an inexpensive evaluation kit that allows you to program PSoC(R) devices using the MiniProg programming unit. A MiniEval PCB is also included in the kit for your use.

The MiniEval PCB is a programming and evaluation board that allows DIP device socket programming. The MiniEval board also includes LEDs and a POT for simple evaluation and demonstration, but does not include a prototyping area. The MiniProg uses a 5-pin ISSP (In-System Serial Programming) header to program PSoC devices on the MiniEval PCB or directly on a target board.

Hardware Description:

Supports all PSoC Programmable System-On Chip families, including automotive, except CY8C25/26xxx devices.

Kit Includes:

- MiniProg Programming unit
- MiniEval Socket Programming and Evaluation board
- 28 pin CY8C29466-24PXI PDIP PSoC Device Sample
- PSoC Designer Software CD
- Getting Started Guide
- USB 2.0 Cable
