Replacement In-Circuit Emulation (ICE) Pods for Debugging 44TQFP CY8C22545 PSoC® Devices

Kit Contents
• CY8C22545 Emulation Pod

Hardware Description
The CY3250-22545-POD emulation pod kit provides developers with a solution for debugging CY8C22545 projects. This kit provides only replacement pods for the specified PSoC family. The CY8C22545 device is designed to provide a sufficient amount of memory and peripheral resources for use in CapSense™ applications, but is also capable of handling a wide range of applications found in the general-purpose microcontroller market.
