

In-Circuit Emulation (ICE) Pod Kit for Debugging 44TQFP CY8C22545 PSoC® Devices

Kit Contents

- One CY8C22545 Emulation Pod
- Two 44-pin TQFP Foot
- One CY3250-FlexCable
- Two CY8C22545-24AXI Chip Samples

Hardware Description

The CY3250-22545 emulation pod kit provides developers with a solution for debugging CY8C22545 projects. The CY8C22545 devices are designed to provide a sufficient amount of memory and peripheral resources for use in CapSense™ applications, but are also capable of handling a wide range of applications found in the general-purpose microcontroller market.
