## 1、Mechanical Specifications(unit: mm)

Add: Building 16, Wangu Town Robot Industrial Park, Dazu District, Chongqing

## 2、Specifications

### 2.1 Features

- Compact global shutter technology (65 nm/  
40 nm)
- High performance 2.16 um x 2.16 um BSI  
pixel
- Smallest global shutter 804x704 pixels with a  
5.9 mm<sup>2</sup> footprint
  - Small pixel array size of 1.75 mm x 1.53  
mm
  - Optical format 1/10" with 600x600 crop
  - Small die size: 2.73 mm x 2.16 mm
- Full resolution: 10 mW at 10 fps, 20 mW at  
30 fps, 40 mW at 60 fps (target)
- Power consumption scaling with  
features/framerate and software standby
- 1.2Gb/s single lane transmitter MIPI  
CSI-2, with support down to 400 Mb/s
- Control interface supporting I3C (12 Mb/s)  
and I2C fast mode+ (1 Mb/s)
- Integrated temperature sensor with  $\pm 2^\circ C$   
accuracy [25° C to 85° C]
- Up to three adjacent pixels with different  
integration times on the same frame (no  
defect correction)
- Dynamic defective pixel correction
- Adaptive Gaussian noise reduction (up to 3  
dB to 9 dB noise reduction)
- Embedded auto exposure
- Piece wise linear (PWL), one setup per  
context, 4 points x/y per setup
- Image difference and ambient removal  
modes
- Auto wake-up mode, ultralow power mode  
where the sensor sends a pulse with  
scene changes, to wake up the host for  
further image analysis (target)
- Programmable sequences of 4-frame  
contexts, including illumination control
- Up to 4-LED control outputs, synchronized  
on sensor integration periods with flexible  
timings and PWM (pulse-width modulation)  
control
- Master/slave with external frame start
- Mirror/flip readout
- 1024 bits OTP available for the user/host
- Crop, binning (x2 and x4) and subsampling  
(x2 and x4)
- 43 IO pads (only three IO pad rows, no pads  
on top side)
- Operating junction temperature: -30° C to  
85° C
- High optical performance:
  - Total full well 10000e-, full well 7500e-  
and temporal noise < 5e- leading to a  
native dynamic range of 63.5 dB
  - PLS  $\leq -80$  dB at 940 nm
  - QE940nm  $\geq 22\%$  with MTF940nm  $\geq 34\%$  at Nyquist
  - QE550nm  $\geq 83\%$

### 2.2 Description

The VD55G1 is an advanced global shutter with 2.16 um pixel. It has a small die size of 2.73 x 2.16 mm<sup>2</sup>.

## 2.3 Acronyms and abbreviations

Table 1. Acronyms and abbreviations

Acronym/abbreviation	Definition
AWU	auto wake-up
BSI	backside illumination
CCI	camera control interface
CRA	chief ray angle
CSI	camera serial interface
FoV	field of view
fps	frames per second
GPIO	general-purpose input/output
I2C	inter-integrated circuit (bus)
ISL	intelligent status line
ISP	image signal processor
LUT	look-up-table
MIPI	mobile industry processor interface
MTF	modulation transfer function
OIF	output interface
OTP	one-time programmable
PWL	piece-wise linear
PWM	pulse-width modulation
ROM	read-only memory
STBY	standby
SW	software

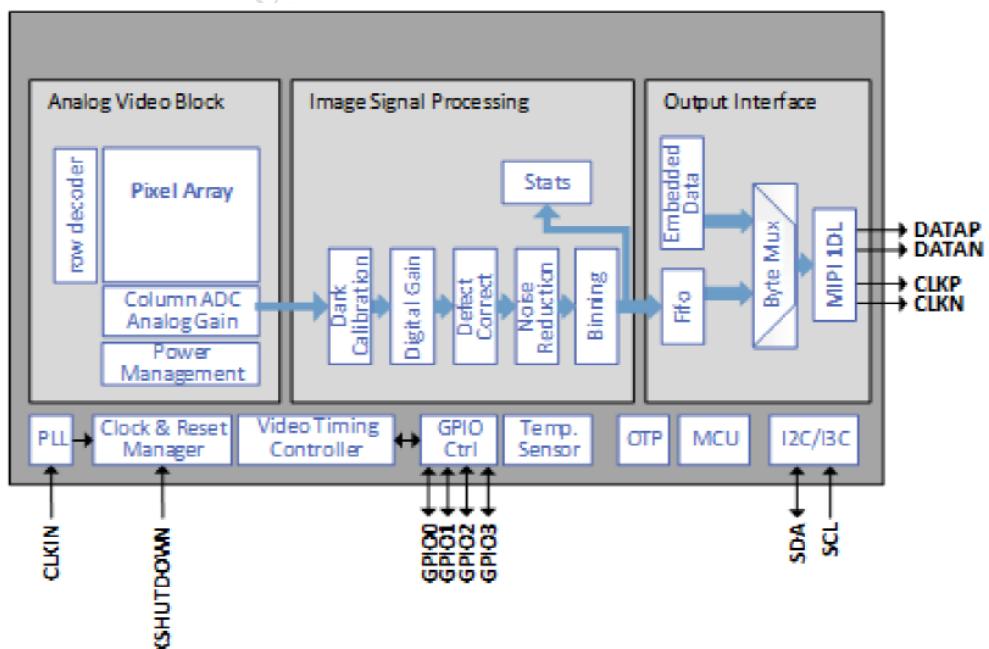

## 2.4 Overview

Table 2. Technical specifications

Feature	Detail
Resolution	Full output resolution 804 x704 - 0.57 megapixel
Sensor technology	3D stacked (65/40 nm)
Sensor control interface	I3C @ 12.5 MHz in SDR I2C @ 1 MHz Fast + mode
Power supplies	Analog: 2.8 V Digital core: 1.15 V IOs (exc MIPI): 1.8 V or 1.2 V
Input clock	6 to 27 MHz
Maximum frame rate	Maximum frame rate
Power consumption	40 mW typical @ 60 fps
HW ISP	DarkCal, dynamic defect correction, noise reduction
Image data interface	MIPI CSI-2 single lane with up to 1.2 Gbps per lane
Macros	1k-bit OTP, Temp sensor
Firmware	ROM based embedded firmware 32 bits CPU

## 2.5 Functional description

Figure 1. Block diagram

## 2.5.1 Interfaces

### Inter-integrated circuit (I<sup>2</sup>C)

The VD55G1 is configured and controlled via an I<sup>2</sup>C interface. It operates in either Fast mode (up to 400 kHz) or Fast+ mode (up to 1 MHz) at 1.8 V. After the CPU boot sequence, the default I<sup>2</sup>C configuration is fast mode plus with a sink capability set to 20 mA. Drive capability can be decreased to 4 mA (Fast mode) by writing a dedicated register once the system has booted.

Device addressing uses a CCI protocol with 2 byte sub addresses.

The default sensor address, 0x20 (including R/W bit), can be overridden:

- Permanently if a non-null value is stored in the OTP dedicated register
- Dynamically with a CPU command when the CPU state is SW STBY

### Camera serial interface (CSI)

The sensor is ready to connect via a single lane mobile industry processor interface (MIPI) CSI-2 serial interface.

The single lane MIPI CSI-2 serial interface supports up to 1.2 Gbps. Resolution is scalable between RAW8 and RAW10.

## 2.5.2 Power supplies

The power supplies required by the sensor are:

- 2.8 V for the analog blocks
- 1.8 V or 1.2V for the digital I/Os
- 1.15 V for the core digital logic and MIPI CSI-2 output drivers

The pixel array requires different positive and negative voltages, all internally generated by charge pumps and regulators. Two voltage references, internally generated, need external decoupling capacitors.

The internal CPU handles the entire power management of the sensor to guarantee the lowest power consumption at any given time.

## 2.5.3 Clock

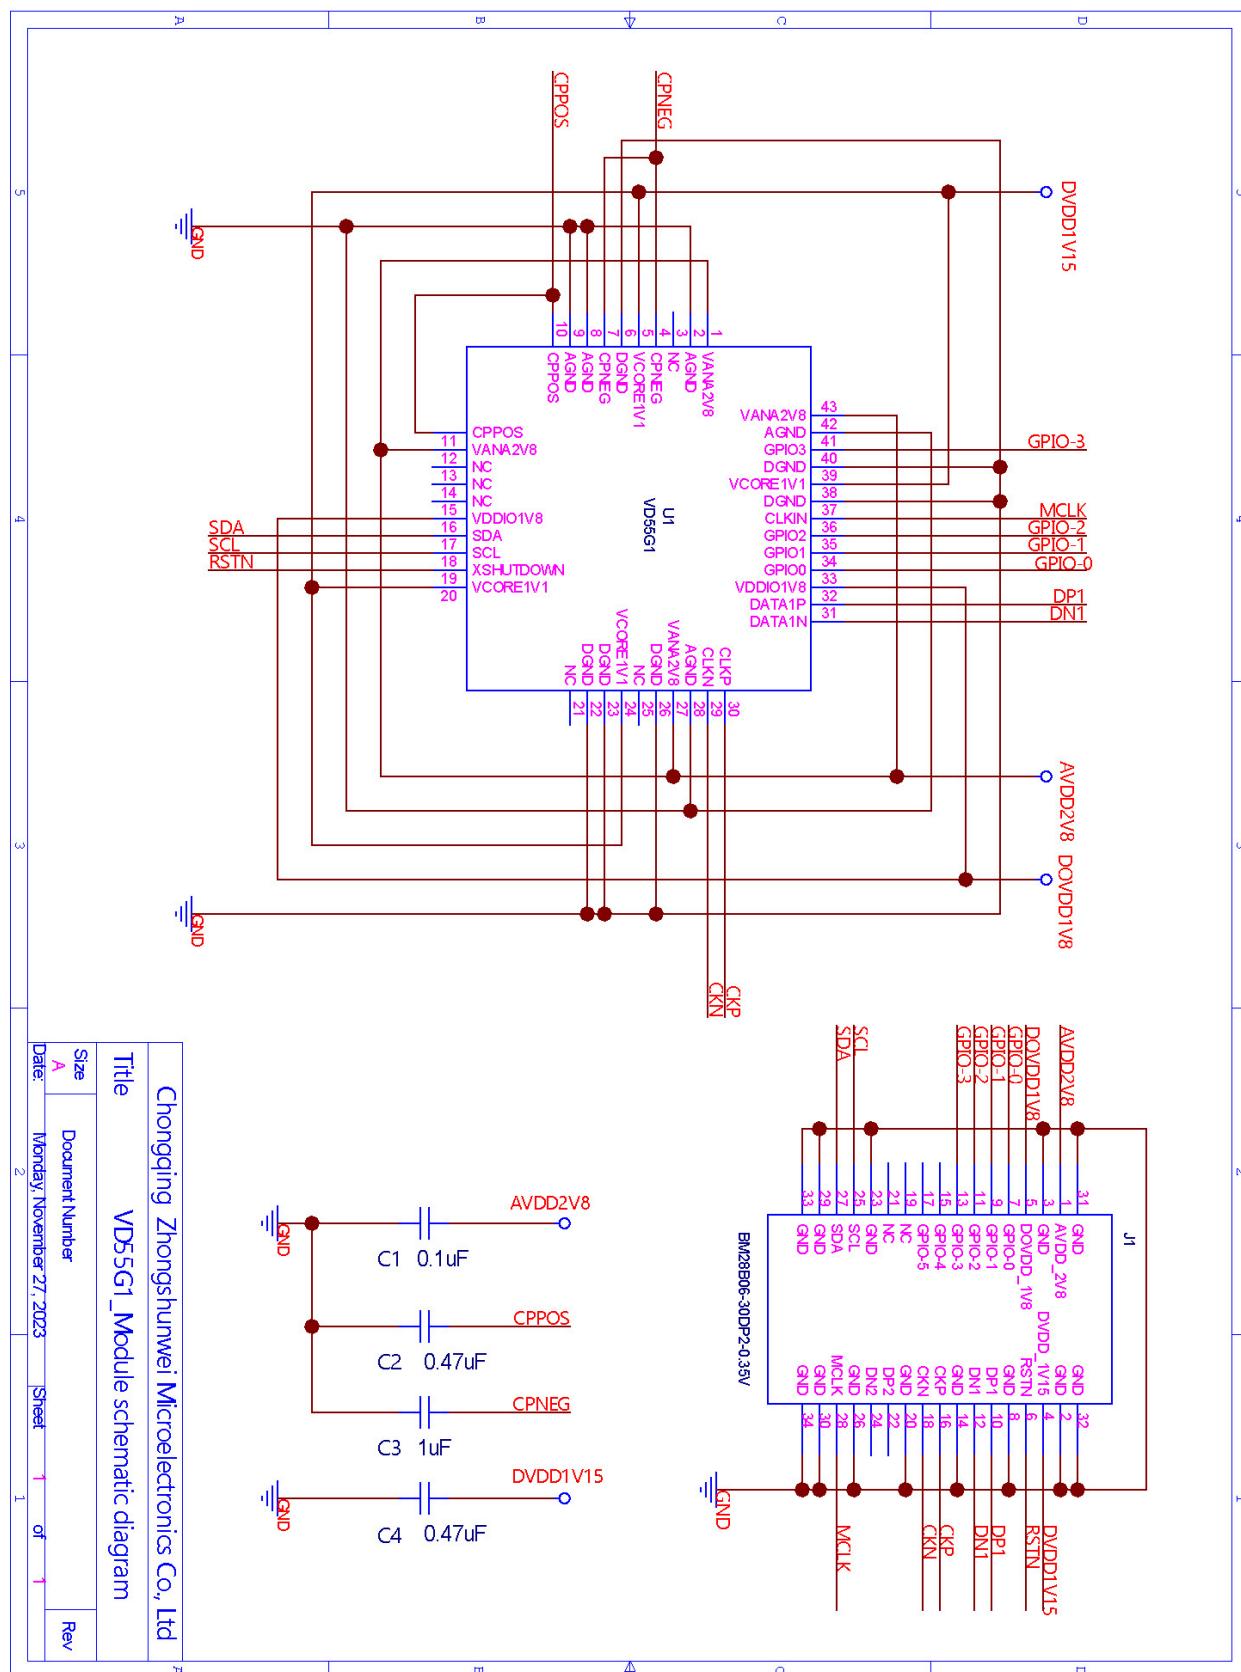

An input clock is required from an external digital clock source in the range of 6 MHz to 27 MHz.

## 2.6 Video pipe

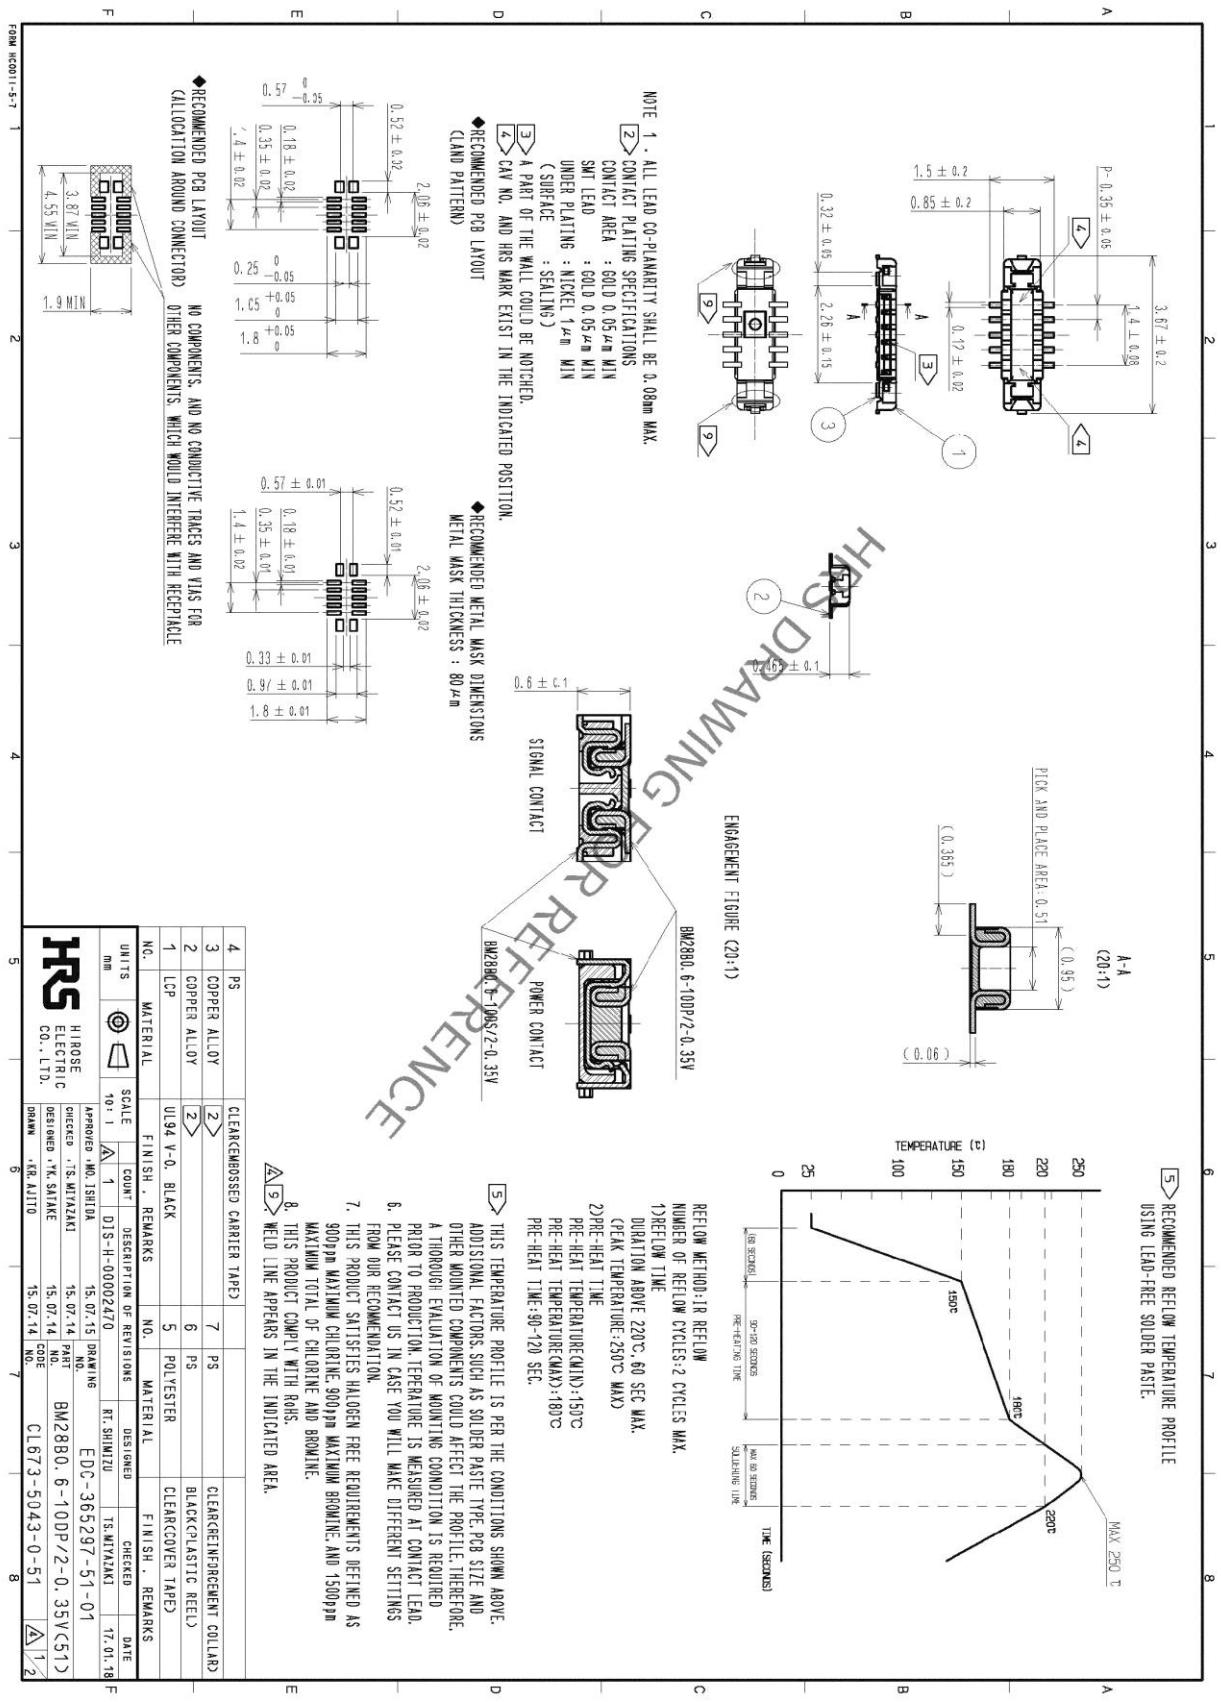

The video pipe performs a number of functions designed to ensure an image of high quality. These functions include:

- Analog sub sampling
- Pattern generation
- Defective pixel correction
- Dark calibration
- Auto exposure
- Binning
- Embedded status lines
- Output interface
- Context
- Crop

## 2.7、Schematic

### 3、Connector specifications

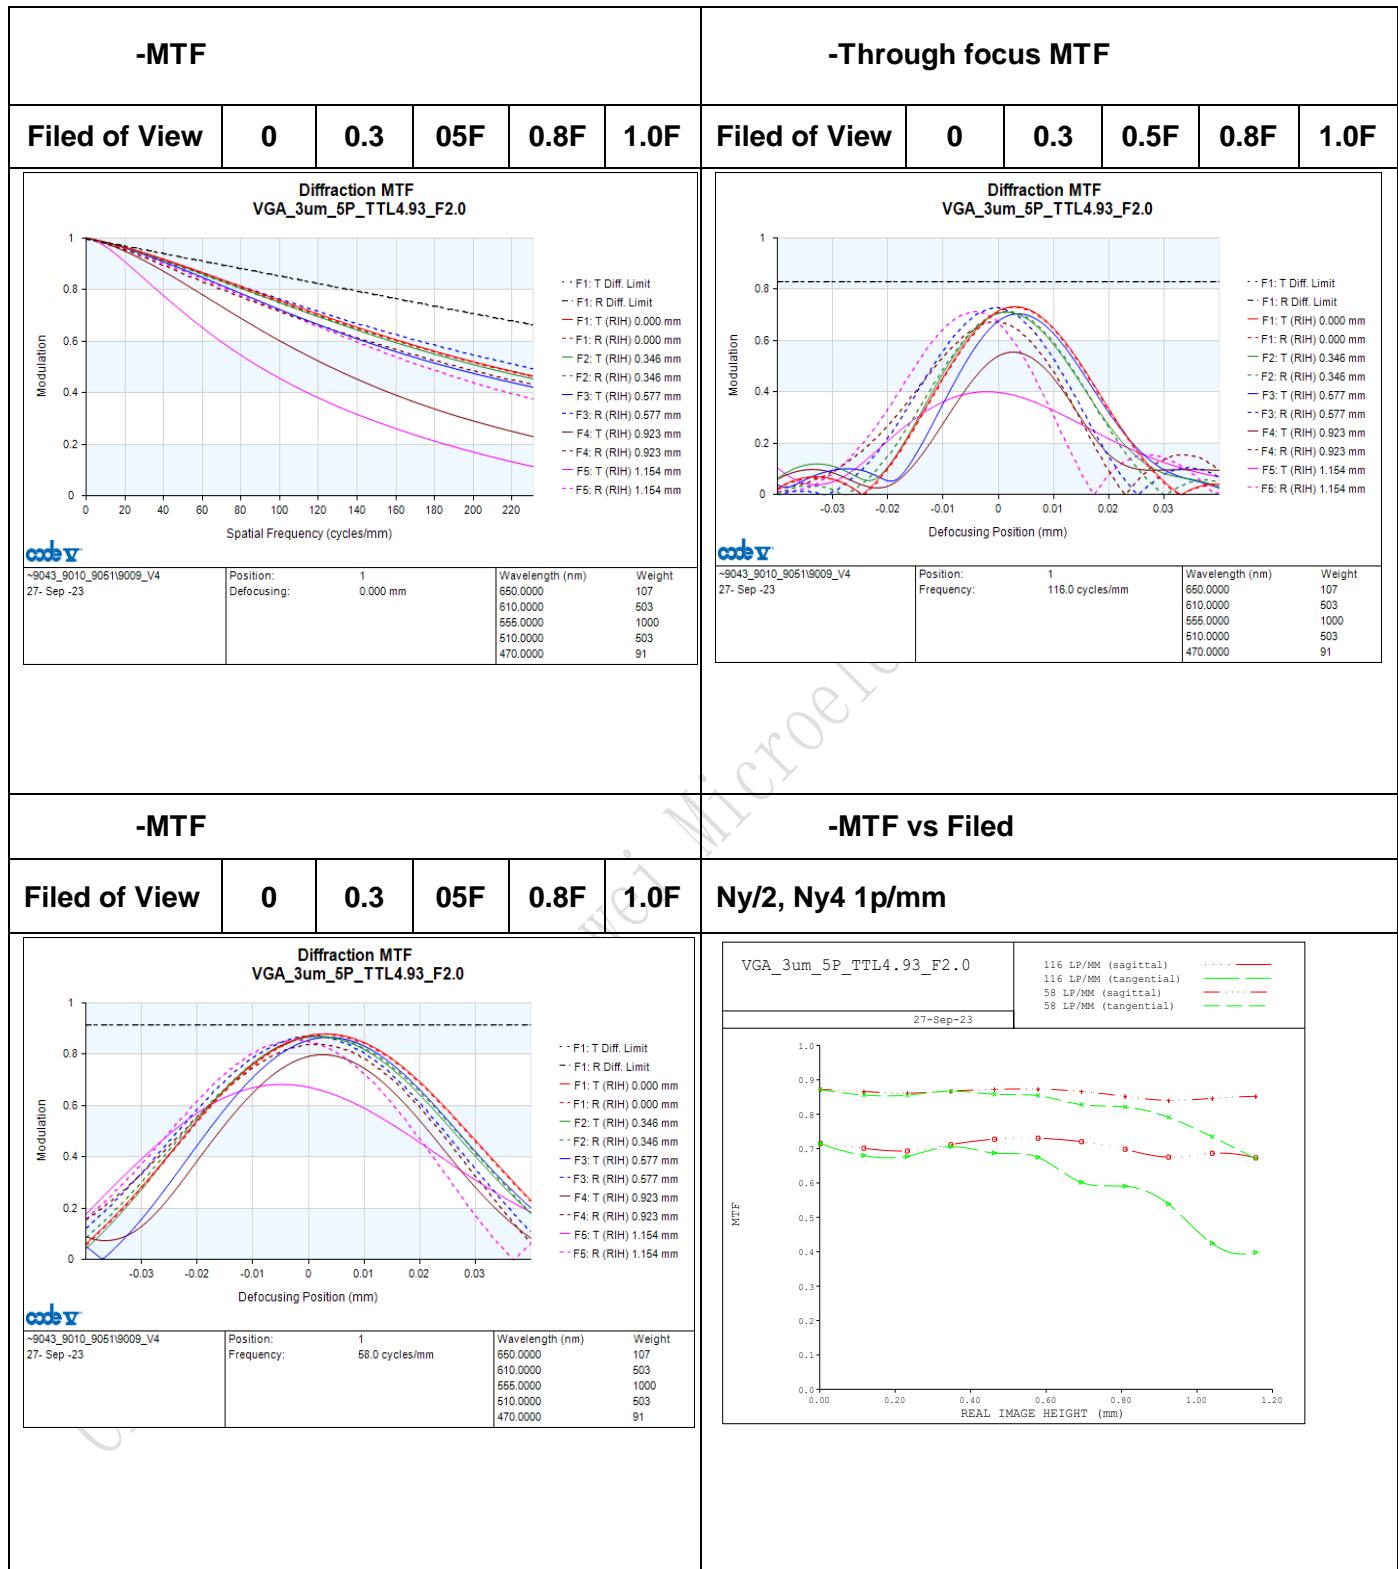

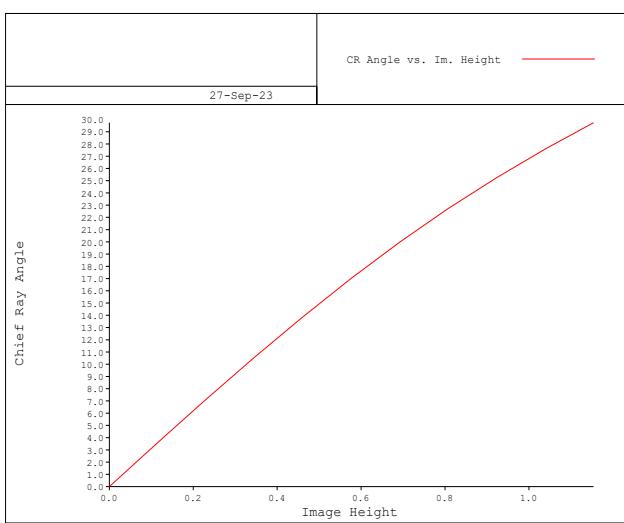

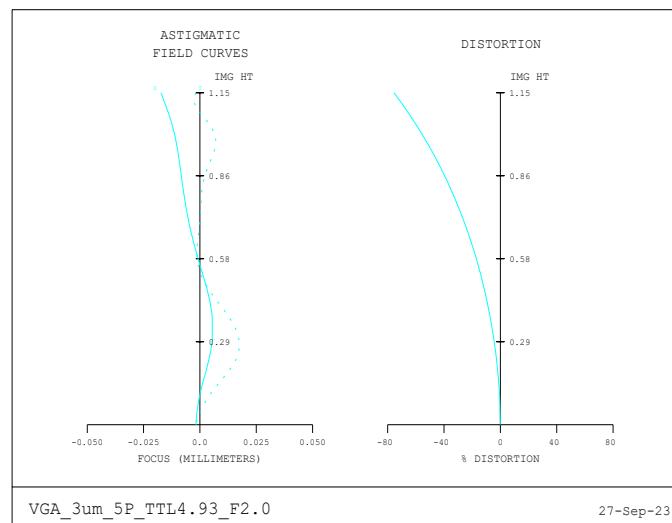

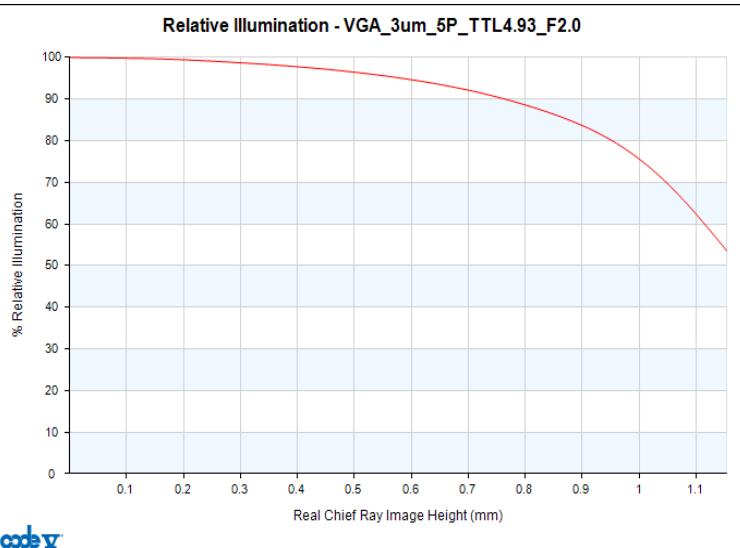

## 4、Lens Specification

### 4.1. Overview

1. Lens Specification			
Item	Specification		Note
Product No.			VD55G1CCB0
Sensor Size	Horizontal	804	
	Vertical (pixels)	704	
	Sensor Pixel Pitch (um)	2.16	
Image diagonal	Φ2.308 mm		
Effective Focal Length (EFL)	0.825		
F-number	2		+/- 5%
Object Distance	35		cm
Field of View	Vertical	105.8	deg ( y=0.76 mm )
	Horizontal	120.7	deg ( y=0.868 mm )
	Diagonal	160.3	deg ( y=1.154 mm )
Wavelength Weighting	650:610:555:510:470=107:503:1000:503:91		
MTF	On Axis	0.47	0.47
	0.3x Field (T/S)	0.45	0.47
	0.5x Field (T/S)	0.42	0.50
	0.8x Field (T/S)	0.23	0.44
	1.0x Field (T/S)	0.11	0.38
	On Axis	0.72	0.72
	0.3x Field (T/S)	0.71	0.71
	0.5x Field (T/S)	0.68	0.73

## 4.5. Filter specifications

Filter: Clear	
Wavelength	Spec
420-680nm	Tave $\geqslant$ 98%
700-1100nm	Tave $\geqslant$ 95%
Glass size	3.7*3.7mm
Glass thick	0.21mm

## 8、Pin Specifications

PIN No.	NAME	Type	Description
1	AVDD	Power	Analog 2.8V power supply
2	GND	Ground	Ground
3	GND	Ground	Ground
4	DVDD	Power	Digital Core 1.15V Power
5	DOVDD	Power	IO 1.8V Power
6	RSTN	I/O	Reset active low
7	GPIO-0	I/O	General purpose I/O and strobe light control-0
8	GND	Ground	Ground
9	GPIO-1	I/O	General purpose I/O and strobe light control-1
10	DP1	Output	MIPI data lane 1 positive
11	GPIO-2	I/O	General purpose I/O and strobe light control-2
12	DN1	Output	MIPI data lane 1 negative
13	GPIO-3	I/O	General purpose I/O and strobe light control-3
14	GND	Ground	Ground
15	NC	-	-
16	CKP	Output	MIPI clock lane positive
17	NC	-	-
18	CKN	Output	MIPI clock lane negative
19	NC	-	-
20	GND	Ground	Ground
21	NC	-	-
22	NC	-	-
23	GND	Ground	Ground
24	NC	-	-
25	SCL	Input	SCCB interface input clock
26	GND	Ground	Ground
27	SDA	I/O	SCCB interface data pin
28	MCLK	Input	Input clock
29	GND	Ground	Ground
30	GND	Ground	Ground

## 9、Appearance Specification

Exterior				
NO.	Test Item	Test Conditions	Detection method	Judge standard
1	Module appearance	No dirt, no visible scratches on the surface of the module, no impurities in the plastic	8X magnifier	Pass
2	Lens	There should be no visible scars or dirt when inspected under 800±100Lux intensity head-up and 45-degree reflected light.	8X magnifier	Pass
3	UV Glue	The dispensing length is 1/3-1/2 of the circumference, and the glue cannot overflow to the lens end surface and the lens base	8X magnifier	Pass
4	Sealant	Fill the sealant evenly between the base and the FPC. There should be no gaps or uneven thickness, and there should be no glue overflowing the edge of the FPC to cause the appearance of oversize.	8X magnifier	Pass
5	FPC	1) There is no dirt on the surface, and the printed fonts are clear; 2) The length of the edge burr is less than 1mm, and the width is less than 0.3mm; 3) The length of the edge notch is less than 1mm, the width is less than 0.1mm, each side does not exceed 2 points, and no sharp corners tearing inward are allowed	40X microscope (continuous zoom)	Pass
6	Connector	1) Lack of tin is not allowed, and short circuit with multiple tins is not allowed 2) No foreign matter is allowed in the connector slot 3) PIN feet are not allowed to be lifted	40X microscope (continuous zoom)	Pass
7	Reinforcing steel plate	(1) The surface must not be dirty, rusted or scratched; (2) The height of the positioning column beyond the board surface is $\leq 0.1\text{mm}$	Visually	Pass
8	Accessories	The paste direction is correct, the paste should not exceed the edge of the steel plate, no protrusions, double-sided tape When the protective film is torn off, there must be no glue detachment, deformation, or damage	Visually	Pass

Size				
NO.	Test Item	Test Conditions	Detection method	Judge standard
1	High	Meet the requirements of the drawings	Caliper	Pass
2	Length	Meet the requirements of the drawings	Caliper	Pass
3	Width	Meet the requirements of the drawings	Caliper	Pass

## 10、Image Specification

Optical performance testing requirements				
NO.	Test Item	Test Conditions	Detection method	Judge standard
1	<b>Dust</b>	Under the white field, take the image and visually observe the entire screen without any visible foreign objects.	Test Fixture. Light box. 6500K white backlight	Pass
2	<b>Imaging direction</b>	Meet the requirements of the drawings	Test Fixture.	Pass
3	<b>Dead &amp; Wound Pixel</b>	1) Under dark field: the total number of bright spots is less than 400 pixels; 2 adjacent pixels The aggregated bright spots are less than 20; there are no aggregated bright spots with more than 3 pixels. 2) Under the white field: the total number of dark spots is less than 400 pixels; 2 adjacent pixels The accumulated dark spots are less than 20; there are no accumulated dark spots above 3 pixels.	Test Fixture. Light box. 6500K white backlight	Pass
4	<b>TV Line</b>	0.5M pixels: the center is not less than 350LW/PH, and the four corners are equal to or equal to 250LW/PH	ISO12233	Pass
5	<b>FOV</b>	Diagonal: 160.3°	Angle test card	Pass
6	<b>TV distortion</b>	Pincushion distortion (positive number) or barrel distortion (negative number) is not more than < -76%	Distortion test card	Pass

## 11、Reliability Specification

NO.	Test Item	Test Conditions	Judge standard
1	Low Temperature Storage Test	Keep in $-20 \pm 3^{\circ}\text{C}$ duration for 24 hrs	After the test, the function and appearance should be normal after 2H at room temperature.
2	High Temperature Storage Test	Keep in $+60 \pm 3^{\circ}\text{C}$ duration for 24 hrs	After the test, the function and appearance should be normal after 2H at room temperature.
3	Low temperature operating	Temperature : $-20^{\circ}\text{C} \pm 2^{\circ}\text{C}$ Time :24 hours	After the test, the function and appearance should be normal after 2H at room temperature
4	High temperature operating	Temperature : $60^{\circ}\text{C} \pm 2^{\circ}\text{C}$ Time :24 hours	After the test, the function and appearance should be normal after 2H at room temperature
5	Drop test Free fall (Package State)	Surface (floor): Concrete or steel Number of drops: 18 Positions: Random Height: 30cm	After the test, the test function is normal, and there is no obvious abnormality in appearance.
6	Vibration (Package State)	Frequency range: 10—50 Hz amplitude: 2mm Duration 1 h for each position. Test all 3 axes (X, Y, Z)	After the test, the function and appearance should be normal after 1H at room temperature.
Test Conditions:			
Illumination: $150 \pm 10\%$ LUX			
Color temperature: $6500 \pm 150\text{K}$			
Headlight Box $600 \pm 10\%$ LUX			

## 12、Packing specification
