

MLX92251LSE-AxA

Dual Hall Effect Latch with Speed & Direction Detection

Features and Benefits

- Operating Voltage from 2.7V to 24V
- Two Integrated Hall plates for Direction Detection
- Latching Magnetic Characteristics
- Speed & Direction Open-Drain Outputs
- Direction Output updated prior Speed Output
- Excellent Temperature Stability
- Reverse Supply Voltage Protection
- Output Current Limitation and Auto-Shutoff
- Under-Voltage Lockout Protection

Applications

- Windows lifter with Anti-Pinch feature
- Rotation speed & direction detection
- Linear speed & direction detection
- Angular position detection
- Power closures with Anti-Pinch features

1. Functional Diagram

2. General Description

The Melexis MLX92251 is a second generation Hall-effect dual latch designed in mixed signal CMOS technology. The device integrates a voltage regulator, two Hall sensors with advanced offset cancellation system and two open-drain output drivers, all in a single package.

Two Hall plates are integrated on the same piece of silicon, thus using the high precision of the wafer fabrication process to ensure a fixed

spacing of 1.45mm between the sensing elements. The first Hall plate signal is used to provide the speed signal output. The combination of both the first and second Hall plate signals is then internally processed to directly deliver a direction signal output.

The MLX92251 shares the MLX922xx-based platform, synonym of high performance in terms of electrical specification, magnetic specification and protection level.

With latching magnetic characteristics, the speed (SP) output is turned low or high respectively with a sufficiently strong South or North pole facing the package top side. When removing the magnetic field, the device keeps its previous state.

The direction (DIR) output is latched in Low or High state depending on the movement direction of the applied magnetic field, as a result of certain magnetic pulse sequence on both Hall sensors.

The MLX92251 is delivered in a Green compliant 5-pin Thin Small Outline Transistor (TSOT) for surface-mount process.

Table 2: electrical specifications

1 Typical values are defined at $T_A = +25^{\circ}\text{C}$ and $V_{DD} = 12\text{V}$

2 Based on device characterization results, not subject to production test

3 Measured between $0.1 \cdot V_{PU}$ and $0.9 \cdot V_{PU}$

4 R_{PU} and V_{PU} are respectively the external pull-up resistor and pull-up power supply

5 If the Output is in Current Limitation longer than t_{CLON} the Output is switched off in high-impedance state. The Output returns back in active state at next reaching of B_{OP} or after t_{CLOFF} time interval

6 Controlled delay between direction (DIR) signal update and speed (SP) signal update

7 Maximum switching frequency corresponds to the maximum frequency of the applied magnetic field which is detected without loss of pulses

8 The Power-On Time represents the time from reaching $V_{DD} = 2.7\text{V}$ to the first refresh of the SP output

8.2. Recommended Application Schematic for ISO7637-2 (pulses 5a and 5b)

Notes:

1. Recommended for conducted transients on supply line above 32V with duration above 500ms.
2. Recommended for conducted transients on supply line above 36V.
3. Recommended zener diode Z1 is BZX55C27 or equivalent.

8.3. Speed (SP) Output Behavior vs. B_{OP}/B_{RP}

Note: The decision for output update is taken at the end of each magnetic measurement cycle

8.4. Output Jitter, Speed Signal Delay and Direction Detection

Output Jitter

Direction Detection

α_{DET} is the angular difference between H1 and H2 magnetic threshold crossing points;
 B_{H1} (B_{H2}) is the magnetic field facing Hall plate H1 (H2) as a function of the mechanical angle α_{mech} ;
 α_B is the angular difference between B_{H1} and B_{H2} ;
 $B_{match} < 3mT$ is the magnetic matching (see Magnetic Specifications section)
 $dB/d\alpha$ is the magnetic field gradient
 f_{Bmax} is the maximum magnetic field frequency at which the direction will be detected without error
 Δt is the time difference between H1 and H2 magnetic threshold crossing points;

For example, if $\alpha_B = 5^\circ$ and $dB/d\alpha > 1mT^\circ$;
 for MLX92251 $\Delta t = 10\mu s$ (definitely $> 2*|t_{JITTER}|$) could be assumed;
 The calculated $f_{Bmax} = 555Hz$.

Speed Signal Delay

8.5. UV lockout and POR behaviour

NOTE: Start-up behaviour feature does not occur after under-voltage lockout. $V_{POR} \leq 2V$ (based on device characterization results).

10. Standard information regarding manufacturability of Melexis products with different soldering processes

Our products are classified and qualified regarding soldering technology, solderability and moisture sensitivity level according to following test methods:

Reflow Soldering SMD's (Surface Mount Devices)

- IPC/JEDEC J-STD-020
Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices (classification reflow profiles according to table 5-2)
- EIA/JEDEC JESD22-A113
Preconditioning of Nonhermetic Surface Mount Devices Prior to Reliability Testing (reflow profiles according to table 2)

Wave Soldering SMD's (Surface Mount Devices) and THD's (Through Hole Devices)

- EN60749-20
Resistance of plastic- encapsulated SMD's to combined effect of moisture and soldering heat
- EIA/JEDEC JESD22-B106 and EN60749-15
Resistance to soldering temperature for through-hole mounted devices

Iron Soldering THD's (Through Hole Devices)

- EN60749-15
Resistance to soldering temperature for through-hole mounted devices

Solderability SMD's (Surface Mount Devices) and THD's (Through Hole Devices)

- EIA/JEDEC JESD22-B102 and EN60749-21
Solderability

For all soldering technologies deviating from above mentioned standard conditions (regarding peak temperature, temperature gradient, temperature profile etc) additional classification and qualification tests have to be agreed upon with Melexis.

The application of Wave Soldering for SMD's is allowed only after consulting Melexis regarding assurance of adhesive strength between device and board.

Melexis recommends reviewing on our web site the General Guidelines [soldering recommendation](http://www.melexis.com/Quality_soldering.aspx) (http://www.melexis.com/Quality_soldering.aspx) as well as [trim&form recommendations](http://www.melexis.com/Assets/Trim-and-form-recommendations-5565.aspx) (<http://www.melexis.com/Assets/Trim-and-form-recommendations-5565.aspx>).

Melexis is contributing to global environmental conservation by promoting **lead free** solutions.
