

Product Number: IS-DEV KIT-1
Development Kits

Design flexibility has never been more simple. NKK's SmartSwitch™ product line allows you to design what you want, any way you want it. Our series of LCD programmable switches and displays are developed for use with a wide variety of applications.

Using the [Design Online Tools](#), engineers can easily program text, draw graphics and experiment with their design concepts. Once completed, these programs can be downloaded into the development kit, which enables engineers to easily test their programs on actual SmartSwitch™ pushbuttons and displays. Engineers can then present their concepts and product ideas to colleagues and with clients.

In addition, the development kits offer engineers a renewed flexibility, because the printed circuit board units have sockets for the LCD pushbuttons and displays that allow them to be interchanged for optimal design testing. Engineers can choose between a variety of LED backlighting color, RGB, intensity and LCD display combinations with the SmartSwitch™ series.

- SmartSwitch™ Development Kits are a cost effective tool for rapidly prototyping new design ideas
- Designed for engineers to expedite the design process and reduce development cost

IS-DEV KIT-1: One SmartSwitch™ programmable LCD display module and two PCB mounted tact switches, with flash memory, power and programming connections.
