

**SIL type SSR with  
9mm thickness  
controls up to 3A**

## AQ8 RELAYS

### FEATURES

**1. Slim with 9 mm .354 inch thickness**  
The thin type (45 mm long × 24 mm high × 9 mm wide) (1.772×.945×.354 inch) permits high density mounting.

**2. Excellent in noise resistance**

Since the input and output are insulated by the phototriac coupler, the noise on the output side is not fed back to the input side.

**3. Snubber circuit integrated**

The snubber circuit is integrated to prevent malfunction caused by the rapid rise of the voltage on the output side, such as inductive load and noise.

**4. Zero-cross and random types are available.**

The zero-cross type generates minimal noise by suppressing occurrence of radio frequency interference (RFI) and electromagnetic interference (EMI).

The random type features a short operation time which permits phase control.

**5. High dielectric strength: 3,000 V AC (between input and output)**

**6. Two kinds of terminals distance are available. (.200 and .300 inch)**

**7. High reliability, long life and maintenance-free**

### TYPICAL APPLICATIONS

Most suitable as drivers for small size AC motors, solenoids, solenoid valves and so on.

1. Copying equipment
2. Air conditioners
3. Industrial equipment such as NC machines, sequencers, robots, etc.

### Compliance with RoHS Directive

### ORDERING INFORMATION

Load current

2 A

3 A

Load voltage

1: 75 to 125 V AC  
2: 75 to 250 V AC

Input terminal distance

C1: 5.08 mm .200 inch  
C2: 7.62 mm .300 inch

Type

ZT: Zero-cross type

T: Random type

Input voltage

5, 12, 24 V DC

## 2. Characteristics (Ambient temperature: 20°C 68°F; Input voltage ripple: 1% or less)

Item	Type	Zero-cross type	Random type	Remarks
Operate time, max.		1/2 cycle of voltage sine wave + 1 ms	1 ms	
Release time, max.		1/2 cycle of voltage sine wave + 1 ms		
Insulation resistance, min.		10 <sup>9</sup> Ω between input and output		at 500 V DC
Breakdown voltage		3,000 V AC between input and output		For 1 minute
Vibration resistance	Destructive	10 to 55 Hz at double amplitude of 3 mm		1 hour for X, Y, Z axis
	Functional	10 to 55 Hz at double amplitude of 3 mm		10 min. for X, Y, Z axis
Shock resistance	Destructive	Min. 980 m/s <sup>2</sup> {100 G}		5 times each for X, Y, Z axis
	Functional	Min. 980 m/s <sup>2</sup> {100 G}		4 times each for X, Y, Z axis
Ambient temperature		-30°C to +80°C -22°F to +176°F		
Storage temperature		-30°C to +100°C -22°F to +212°F		
Operational method	Zero-cross (Turn ON and Turn OFF)	Random turn ON, zero-cross turn OFF

## NOTE

### 1. When used for the load less than rated

In case of the load current less than rated, malfunction may result from the residual voltage across the both ends of the load even if the solid state relay is turned off. Use a dummy resistor as a countermeasure.

The total of the current through the resistor and the load current must exceed the min. rated load current.

In case the dummy resistor is not used, keep in mind that the residual voltage becomes as follows:

Example:

For the inductive load by the 20 mA load current and the 200 V AC load voltage, the load impedance becomes  $10 \text{ k}\Omega$  and  $Ve/V = 14\%$  is estimated from the right above graph. Accordingly, the 28 V voltage remains across the both ends of the load when the solid state relay is turned off.

- Characteristics of residual voltage vs. load impedance

### 2. when the terminal is bent

Care shall be taken neither to apply mechanical stresses to the mold area of the solid state relay nor to bend the terminal 45 degrees or more.

## For Cautions for Use.
